Table of Contents

#	SECTION	FOCUS
1	Market Landscape	Qatar HE market sizing and dynamics
2	Institutional Journey Map	End-to-end lifecycle from lead to referral
3	Acquisition Engine	How we enter institutions
4	The Pilot Playbook	Getting live in 1-2 weeks
5	Retention Architecture	Three dependency layers
6	Expansion Mechanics	Course → Department → Campus → Network
7	Product → Growth Mapping	Feature-to-outcome alignment
8	Pricing & Revenue Model	Tier structure and revenue timeline
9	Competitive Moat	Five defensibility layers
10	Risk Matrix	Probability × impact analysis
11	12-Month Timeline	Quarter-by-quarter milestones
12	The Growth Equation	Summary formula

The Core Question This Document Answers

How does Edeviser enter an institution, prove value quickly, become part of daily usage, and then expand across the entire system — creating a flywheel that feeds itself?

MARKET INTELLIGENCE

1. Qatar Higher Education Landscape

A concentrated, high-value cluster market with universal OBE mandates and no dominant platform.

12
UNIVERSITIES

30+
TECHNICAL COLLEGES

\$7.2B
GCC EDETECH BY 2027

1 City
DOHA CLUSTER

Why Qatar First

Cluster Market Advantage: All 12 universities and 30+ colleges are in a single metropolitan area (Doha). One success story reaches every decision-maker through shared accreditation bodies, faculty mobility, and Ministry mandates.

FACTOR	DETAIL
OBE Mandate	CNA-Q requires all institutions to demonstrate outcome-based curriculum alignment
Accreditation Pressure	ABET, AACSB, QAA visits are cyclical — institutions prepare 12-18 months in advance
Language	Arabic/English bilingual mandatory — Edeviser ships with full i18n from day 1
QNV 2030	Qatar National Vision prioritizes education quality and knowledge economy
No Incumbent	No dominant OBE + engagement platform exists in the region
Budget	Qatar HE institutions have strong per-student technology budgets

Target Pipeline

INSTITUTION	TYPE	STUDENTS	TIER	ACCREDITATION	PRIORITY
Qatar University	Public	15,000	Enterprise	CNA-Q / ABET	High
Univ. of Doha for Science & Tech	Public	8,000	Growth	CNA-Q	High
Hamad Bin Khalifa University	Private	3,000	Growth	QAA	High
Lusail University	Private	5,000	Growth	CNA-Q	Medium
College of North Atlantic — Qatar	Technical	6,000	Growth	CNA-Q	Medium
Weill Cornell Medicine — Qatar	Medical	1,500	Growth	ABET / LCME	Medium
Carnegie Mellon — Qatar	Branch	500	Starter	ABET	Low
Texas A&M — Qatar	Branch	800	Starter	ABET	Low
Georgetown — Qatar	Branch	300	Starter	MSCHE	Low
Northwestern — Qatar	Branch	400	Starter	HLC	Low
Community College of Qatar	Community	4,000	Growth	CNA-Q	Medium
Ahmed Bin Mohammed Military College	Military	2,000	Growth	Government	Low

Total Addressable Pipeline: \$620K–\$1.8M ARR across 12 institutions. First 3 high-priority institutions alone represent \$225K ARR.

CUSTOMER LIFECYCLE

2. Institutional Journey Map

The complete lifecycle from first contact to multi-institution referral.

PHASE	DURATION	KEY MILESTONE	RISK
First Contact → Discovery	1–2 weeks	Decision-maker identified, pain confirmed	Low
Discovery → Pilot Agreement	2–4 weeks	1 course, 1 teacher, 30–100 students	Medium
Pilot Setup	3–5 days	Course structure uploaded, students onboarded	Low
Pilot Running	2–4 weeks	Daily usage data, engagement metrics	Medium
Pilot Review → Dept. Decision	2–4 weeks	Results presentation to dean	Medium
Department Rollout	1 semester	5–15 courses, multiple teachers	Low
Campus Rollout	1–2 semesters	Admin dashboard, accreditation reports	Low

Step-by-Step Execution

- Step 1 — First Contact**
Direct outreach to QA director or program coordinator via LinkedIn/email, or referral from accreditation body workshop.
- Step 2 — Discovery Call (20 min)**
Confirm the pain, identify the decision-maker, propose a pilot. "How do your teachers currently report CLO attainment?" / "How long does it take to compile an accreditation report?"
- Step 3 — Live Demo (30 min)**
Create course with CLOs → Map to PLOs → Create assignment with rubric → Grade submission → Show curriculum matrix updating live → Show student XP dashboard → Export accreditation report. ~15 min demo, 15 min Q&A.
- Step 4 — Pilot Agreement**
Free pilot, 1 course, 1 teacher, 30–100 students, 2–4 weeks. We handle setup. No contract, no commitment.
- Step 5 — Pilot Execution**
Day 1–3: Setup. Day 7: Check-in. Day 14: Mid-pilot review with coordinator. Day 21–28: End-of-pilot presentation.
- Step 6 — Results → Expand → Refer**
Present before/after metrics to dean. Department expansion (5–15 courses). Campus rollout. Referral via case study and CNA-Q workshop.

GO-TO-MARKET

3. B2B Acquisition Engine

How we enter institutions — entry points, the initial wedge, and the conversation framework.

3.1 Entry Points

ENTRY POINT	THEIR PAIN	OUR WEDGE
Program Coordinator (Primary)	Accreditation in 6–12 months, CLO-PLO mapping in spreadsheets	"Upload your course structure. We auto-generate the curriculum matrix."
QA Director / Admin	Manual report compilation, scattered data	"One-click accreditation report export with evidence citations."
Department Head	Low engagement, no visibility into underperforming courses	"See which CLOs students are failing — in real time."
Individual Teacher	Grading is tedious, OBE reporting feels like extra work	"Grade once with the rubric — evidence + XP happen automatically."

Primary target: Program Coordinator or QA Director. They own the accreditation pain and have budget authority or direct access to the dean.

3.2 The Initial Wedge

 **The wedge is NOT "we're a gamification platform."**

The wedge is: "We eliminate the gap between grading and accreditation reporting." Teachers grade in one system, then manually enter OBE data in another. Edeviser collapses this into one action.

The hook sequence:

1. **Pain:** "Your teachers grade, then separately fill out OBE compliance forms. That's double work."
2. **Value:** "Grade using a rubric → evidence auto-generated → attainment updates instantly → accreditation report is one click."
3. **Bonus:** "Students see progress in real time — XP, streaks, skill bars — they engage more, generating richer data."

 **Key Insight:** Gamification is the retention hook, not the acquisition hook. Institutions buy compliance automation. Students stay because of engagement.

3.3 Pilot Success Criteria

METRIC	TARGET	PRODUCT FEATURE
Student daily login rate	>50% enrolled	Activity logger + admin dashboard
On-time submission rate	>70%	Assignment submission tracking
Average streak length	>5 days	Streak display, gamification engine
Teacher grading turnaround	<48 hours	Grading interface analytics
Evidence coverage	100% graded	Automatic evidence generation

CLO attainment visibility

Real-time

Attainment rollup, CLO progress bars

The killer metric: "In 2 weeks, you have a live curriculum matrix with real attainment data — something that used to take a semester of manual data collection."

EXECUTION

4. The Pilot Playbook

Getting a pilot live in 3–5 days. Scope: 1 course, 1 teacher, 30–100 students, 2–4 weeks.

DAY	ACTION	PRODUCT FEATURE
Day 1	Admin account + institution settings	Admin onboarding wizard
Day 1	Teacher account, assigned to course	User provisioning
Day 2	Teacher creates CLOs with Bloom's levels	CLO form + Bloom's verb guide
Day 2	CLOs mapped to PLOs	Outcome mappings + weight validation
Day 3	2–3 assignments with rubrics linked to CLOs	Assignment form, rubric builder
Day 3	Students bulk-imported via CSV	Bulk CSV import
Day 4	Students complete onboarding (<3 min)	Onboarding wizard
Day 5	First assignment goes live	Submission flow, XP awards

ZERO INFRASTRUCTURE

SaaS-Ready

No servers to provision. Supabase-hosted, Vercel-deployed. Institution gets a URL and credentials.

BULK IMPORT

2 Minutes

100 students onboarded via CSV. No manual account creation. Email invitations automatic.

BILINGUAL

Arabic + English

Full i18n from day 1. RTL layout support. No localization barrier for Qatar.

WEEK	FOCUS	SUCCESS SIGNAL
Week 1	Activation — onboard, first submissions	>60% login rate, first evidence records
Week 2	Engagement — streaks forming, XP accumulating	>40% with 5+ day streaks
Week 3	Evidence — curriculum matrix populating	100% evidence coverage on graded work
Week 4	Proof — results compiled	Accreditation report exportable

STICKINESS

5. Retention Architecture

Three dependency layers that make switching painful.

LAYER 1 — INSTITUTIONAL

Data Gravity

Immutable evidence records, CLO-PLO-ILO mappings, attainment data — migrating means losing the accreditation evidence trail.

LAYER 2 — STUDENT

Habit Formation

Streaks, badges, XP, leaderboards — loss aversion, sunk cost, social status create behavioral lock-in.

LAYER 3 — TEACHER

Workflow Integration

Rubric grading with auto-evidence saves 30+ min/assignment/section. Teachers won't go back.

Habit Formation Features

FEATURE	MECHANISM	LOCK-IN TYPE
Streak system	Loss aversion — losing a 30-day streak hurts	Behavioral habit
Badge collection	Sunk cost of earned achievements	Achievement investment
Level progression	Level 12 student won't restart at Level 1	Progress investment
Leaderboard position	Social status within peer group	Social identity
Daily habit tracker	Login/Submit/Journal/Read becomes routine	Behavioral routine
Team challenges	Social accountability	Social obligation

Workflow Integration

FEATURE	TIME SAVED	REPLACES
Rubric grading → auto evidence	30+ min/assignment/section	Manual OBE data entry
AI feedback drafts	5–10 min/student/assignment	Writing feedback from scratch
At-risk early warning	7 days earlier detection	Manual student monitoring
Adaptive quiz generation	Hours of question creation	Manual question writing

The Flywheel: Teacher grades with rubric → Evidence auto-generated → Student sees CLO progress + earns XP → Student engages more → More evidence → Richer attainment data → Better accreditation reports → Institution renews → More courses → Cycle accelerates.

Retention Signals

SIGNAL	HEALTHY	AT RISK	INTERVENTION
Teacher weekly active	>80%	<50%	1:1 training session
Student DAU/MAU	>60%	<30%	Review gamification tuning
Evidence generation	Matches grading 1:1	Gaps	Check rubric usage
7-day streak rate	>40% students	<20%	Review notifications
Assignment creation	Steady/increasing	Declining	Teacher reverting to old LMS

SCALE

6. Expansion Mechanics

How we grow from 1 course to campus-wide to multi-institution network.

Stage 1: Course → Department (Semester 1 → 2)

Trigger: Pilot results show measurable improvement in engagement and evidence coverage.

FEATURE	WHY IT PULLS EXPANSION	VALUE AT SCALE
Curriculum matrix (PLO × Course)	Only valuable with multiple courses	Shows gaps across department
Cross-course CLO heatmap	Meaningless with 1 course	Identifies curriculum holes
Coordinator dashboard	Boring with 1 course, actionable with 10	Aggregated intelligence
Gap analysis view	Requires multi-course data	Accreditation preparation

 **Key Insight:** The coordinator dashboard is intentionally designed to be most valuable at department scale. This creates natural pull for expansion.

Stage 2: Department → Campus (Semester 2 → 3)

Trigger: Department-level attainment data impresses the dean. Accreditation visit approaching.

New capabilities: Admin dashboard with institution-wide KPIs, accreditation report export (CNA-Q/ABET/HEC), cross-program comparison, cohort trends, graduate attribute tracking, competency framework alignment, institution-wide audit logs.

Stage 3: Campus → Multi-Institution (Year 2+)

CHANNEL	MECHANISM	PRODUCT TIE-IN
Case study	Published results from pilot	Admin dashboard exports
Accreditation referral	CNA-Q evaluators see Edeviser reports	Report templates
University network	Qatar's 12 universities are tightly connected	Same product, new tenant
Faculty mobility	Teachers move between institutions	Same UX, same workflow

Win 1 → Present at CNA-Q Workshop → 3 Approach Us

Qatar has 12 universities and 30+ colleges in a single city. Shared accreditation bodies, faculty who teach at multiple institutions, Ministry mandates that apply to all.

PRODUCT-LED GROWTH

7. Product → Growth Mapping

Every feature maps to a growth outcome. Nothing is built without a clear purpose.

What Drives Adoption (First 2 Weeks)

PRODUCT FEATURE	WHY IT DRIVES ADOPTION	TIME TO VALUE
Bulk CSV import	100 students in 2 minutes	Minutes
Rubric builder + templates	First assignment in 5 minutes	Minutes
Auto evidence generation	First grade → first evidence record	Seconds
Curriculum matrix	Live CLO coverage — replaces spreadsheets	After 2–3 assignments
Student onboarding wizard	7 questions, <3 min	Minutes
Arabic/English bilingual	No localization barrier	Immediate

What Drives Retention (Weeks 2–8)

PRODUCT FEATURE	DEPENDENCY CREATED	WHO IT LOCKS IN
Streak system + freeze	Loss aversion	Student
XP + levels + badges	Sunk cost	Student
AI feedback drafts	Time savings	Teacher
Immutable evidence trail	Data gravity	Institution
Adaptive quizzes	Flow state	Student
Team challenges	Social obligation	Student

What Drives Expansion (Month 2+)

PRODUCT FEATURE	WHO IT CONVINCES	WHY IT PULLS EXPANSION
Curriculum matrix (multi-course)	Coordinator	Only valuable with 5+ courses
Admin dashboard	Admin / Dean	Only valuable with multiple departments
Accreditation report export	QA Director	Replaces weeks of manual work
Gap analysis view	Coordinator	Identifies curriculum holes
Graduate attribute tracking	QA Director	National qualification framework
Course file generation	Teacher / Coordinator	Massive time saver at scale

REVENUE MODEL

8. Pricing & Revenue Model

Tiered pricing that encourages expansion. Per-student cost decreases as the institution scales.

STARTER (PILOT)

\$30K–50K/yr

Up to 500 students · \$60–100/student · \$10K implementation · 1 department, basic reports

GROWTH (RECOMMENDED)

\$50K–100K/yr

500–2,000 students · \$50–100/student · \$20K implementation · Multi-department, AI features, advanced analytics

ENTERPRISE

\$100K–250K/yr

2,000+ students · \$50–125/student · \$40K implementation · Campus-wide, SSO, custom reports

Volume incentive: A department paying \$50K for 500 students (\$100/student) sees the rate drop to \$50/student at campus scale.

PERIOD	INSTITUTIONS	ARR (USD)	MILESTONE
Q4 2026	1 (pilot)	~\$15K	First paid contract
Q2 2027	3	~\$120K	Department-level at 2 institutions
Q4 2027	5	~\$250K	Campus rollout at lead institution
Q2 2028	8	~\$500K	Multi-institution, GCC expansion

\$15K

FIRST CONTRACT

\$250K

YEAR 1 ARR

\$500K

YEAR 2 ARR

\$7.2B

GCC EDTECH TAM

DEFENSIBILITY

9. Competitive Moat

Five layers of defensibility that compound over time.

MOAT LAYER	WHAT IT IS	WHY COMPETITORS CAN'T REPLICATE
Dual-engine fusion	Compliance + engagement in one loop	Requires deep domain knowledge of both
Immutable evidence	Append-only, auditable records	2 semesters = switching loses audit trail
Behavioral lock-in	Streaks, XP, badges, levels	Students/teachers resist losing progress
Accreditation alignment	Templates for CNA-Q, ABET, HEC	Body-specific knowledge, first-mover in Qatar
Cluster dynamics	12 universities in 1 city	Win 2-3 and word-of-mouth does the rest

The Moat Deepens With Time

Every semester adds more evidence records (data gravity), more student progress (behavioral lock-in), more teacher workflows (integration dependency), and more institutional reports (compliance dependency). Switching cost increases exponentially.

Competitive Landscape

COMPETITOR TYPE	EXAMPLES	WHAT THEY DON'T DO
Traditional LMS	Moodle, Blackboard, Canvas	No OBE mapping, no gamification, no evidence automation
OBE-Only Tools	Xitracs, AEFIS, Watermark	No engagement, no gamification, no real-time feedback
Gamification	Classcraft, Kahoot	No OBE compliance, no evidence, no accreditation reports
Edeviser	—	The only platform where grading = evidence = XP = accreditation

RISK MANAGEMENT

10. Risk Matrix & Mitigations

Honest assessment of what could go wrong and how we address each scenario.

RISK	PROB.	IMPACT	MITIGATION
Procurement cycles slow (3–6 mo)	High	High	Pilot-first bypasses procurement — pilot is free
Teachers resist new tools	High	High	Near-zero friction: grade with rubric = done
Students don't engage	Medium	Medium	Core value is compliance. Gamification is bonus
Competitor enters Qatar	Low	High	Production-ready now. 12+ months to replicate
Accreditation changes	Medium	Medium	Configurable templates. CQI module adapts
Pilot doesn't convert	Medium	High	Target institutions with imminent accreditation
Data privacy concerns	Medium	High	RLS on every table, FERPA-aligned
Arabic localization	Medium	Medium	Native review, RTL-first design

2HIGH × HIGH

4MEDIUM RISK

2LOW RISK

🦊 The two high-risk items (procurement + teacher resistance) are both addressed by the same strategy: free pilot with near-zero teacher friction.

EXECUTION ROADMAP

11. 12-Month Execution Timeline

Quarter-by-quarter milestones from Qatar market entry to commercial operations.

Q2 2026 (Apr–Jun): Market Entry

- Month 1–2: Qatar Setup**
Founder relocation, QFC entity, QID processing, QSTP application. Product: RLS audit, load testing, CNA-Q templates, Arabic review.
- Month 3: First Outreach**
Contact Qatar University, UDST, HBKU. Discovery calls. Demo prep with CNA-Q templates.

Q3 2026 (Jul–Sep): Pilot Phase

- Month 4–5: First Pilot**
1 university, 1–2 departments, 200–500 students. Weekly check-ins. Bridge Program reimbursement submitted.
- Month 6: Results & Iteration**
Top 10 feedback items addressed. Pilot results presentation. Bridge reimbursement arrives (~PKR 1.4M).

Q4 2026 (Oct–Dec): Conversion

- Month 7–8: First Paid Contract**
Pilot converts to paid. Department rollout (5–15 courses). Second institution pilot begins.
- Month 9: Scale v2**
Expand to 2–3 departments. AI features at scale. Case study drafted.

Q1 2027 (Jan–Mar): Commercial Launch

- Month 10–12: Commercial Operations**
2–3 paying institutions. Campus rollout at lead. Case study published. CNA-Q workshop. ARR: \$120K+.

Milestone Summary

MONTH	MILESTONE	REVENUE
1–3	Qatar setup complete, legal entity operational	—
4–6	Pilot running at 1 university	—
6–7	Bridge reimbursement, runway extends to 12+ months	—
7–8	First paid contract signed	~\$15K ARR
9–10	Second institution pilot, department expansion	~\$50K ARR
12	Commercial operations, 2–3 institutions	~\$120K ARR

SUMMARY

12. The Growth Equation

One formula that captures the entire strategy.

The Edeviser Growth Formula

**Compliance Pain (Wedge) × Free Pilot (Entry) × Dual-Engine Flywheel
(Retention) × Cluster Market (Expansion) = Compounding Institutional Growth**

What We Sell (Acquisition)

- Accreditation compliance automation
- "Grade once, report automatically"
- Zero-infrastructure SaaS deployment
- Arabic/English bilingual from day 1

What Grows Them (Expansion)

- Coordinator dashboard (valuable at scale)
- Cross-program analytics
- Accreditation report export
- Graduate attribute tracking

What Keeps Them (Retention)

- Immutable evidence trail (data gravity)
- Student streaks, XP, badges (lock-in)
- Teacher workflow efficiency (time savings)
- Real-time attainment dashboards

What Spreads Us (Referral)

- Case studies from pilot institutions
- CNA-Q workshop presentations
- Faculty mobility between institutions
- Qatar's tight-knit HE community

Edeviser — Human-Centric OBE + Gamification Platform
B2B Institutional Growth Playbook v3.0 — April 2026
Every learning interaction counts.
