

Edeviser — B2B Institutional Growth Playbook

Acquisition → Retention → Expansion Strategy (Product-Tied)

Version: 1.0 | **Date:** April 2026 | **Purpose:** Align product, GTM, and institutional strategy before Qatar market entry

The Core Question This Document Answers

How does Edeviser enter an institution, prove value quickly, become part of daily usage, and then expand across the system?

1. INSTITUTIONAL JOURNEY MAP

First Contact → Discovery Call → Course-Level Pilot (2 weeks) → Pilot Results Review
→ Department Expansion → Campus Rollout → Multi-Institution Referral

Timeline Reality

Phase	Duration	Key Milestone
First Contact → Discovery Call	1–2 weeks	Decision-maker identified, pain confirmed
Discovery → Pilot Agreement	2–4 weeks	1 course, 1 teacher, 30–100 students committed
Pilot Setup	3–5 days	Course structure uploaded, students onboarded
Pilot Running	2–4 weeks	Daily usage data, engagement metrics, attainment evidence
Pilot Review → Department Decision	2–4 weeks	Results presentation to department head/dean
Department Rollout	1 semester	5–15 courses, multiple teachers
Campus Rollout	1–2 semesters	Admin dashboard live, accreditation reports generated

2. B2B ACQUISITION — How We Enter Institutions

2.1 Entry Points (Who We Talk To)

The university buying process has multiple stakeholders. The entry point depends on the institution's current pain:

Entry Point	Their Pain	Our Wedge	Conversation Opener
Program Coordinator (Primary)	Accreditation visit in 6–12 months, CLO-PLO mapping is in spreadsheets, no evidence trail	"Upload your course structure. We auto-generate the curriculum matrix and evidence chain."	"How long did your last accreditation report take to compile?"
Department Head	Low student engagement, high dropout in early semesters, no visibility into which courses are underperforming	"See which CLOs students are failing across your department — in real time, not at semester end."	"Do you know which courses have the lowest CLO attainment right now?"
Quality Assurance / Admin	Manual report compilation, data scattered across LMS + spreadsheets + faculty emails	"One-click accreditation report export with evidence citations."	"How many person-hours does your team spend preparing for accreditation?"
Individual Teacher (Bottom-up)	Grading is tedious, no feedback loop with students, OBE reporting feels like extra work	"Grade once with the rubric — evidence, CLO attainment, and student XP all happen automatically."	"What if grading an assignment also completed your OBE reporting?"

Primary target: Program Coordinator or QA Director. They own the accreditation pain and have budget authority or direct access to the dean.

2.2 The Initial Wedge — Why They Adopt Us First

The wedge is NOT "we're a gamification platform." The wedge is:

"We eliminate the gap between grading and accreditation reporting."

Every institution we're targeting (CNA-Q, ABET, HEC accredited) has the same problem: teachers grade in one system, then manually enter OBE data in another. Edeviser collapses this into one action.

The hook sequence:

1. **Pain recognition:** "Your teachers grade assignments, then separately fill out OBE compliance forms. That's double work."
2. **Instant value proposition:** "With Edeviser, the teacher grades using a rubric → evidence is auto-generated → CLO/PLO/ILO attainment updates instantly → accreditation report is one click away."
3. **Engagement bonus:** "And because students see their progress in real time — XP, streaks, skill bars — they actually engage more, which generates more evidence, which makes your accreditation data richer."

The gamification is the retention hook, not the acquisition hook. Institutions buy compliance automation. Students stay because of engagement.

2.3 Getting a Pilot Live in 1–2 Weeks

Pilot scope: 1 course, 1 teacher, 30–100 students, 2–4 weeks.

Setup process (3–5 days):

Day	Action	Product Feature Used
Day 1	Admin account created, institution settings configured	Admin onboarding wizard, institution settings page
Day 1	Teacher account created, assigned to course	User provisioning, course assignment
Day 2	Teacher uploads/creates CLOs with Bloom's levels	CLO form with Bloom's verb guide
Day 2	Teacher maps CLOs to PLOs (coordinator pre-maps PLOs to ILOs)	Outcome mappings with weight validation
Day 3	Teacher creates 2–3 assignments with rubrics linked to CLOs	Assignment form, rubric builder
Day 3	Students bulk-imported via CSV, enrolled in course	Bulk CSV import, course enrollment
Day 4	Students complete onboarding (personality + learning style, <3 min)	Onboarding wizard (Day 1 minimal profile)
Day 5	First assignment goes live, students start submitting	Assignment list, submission flow, XP awards

What makes this fast:

- No infrastructure setup needed (SaaS, Supabase-hosted)
- Bulk CSV import handles student provisioning in minutes
- Rubric templates reduce teacher setup time
- Student onboarding is 7 questions, under 3 minutes
- Arabic/English bilingual from day 1 (critical for Qatar)

2.4 Pilot Success Criteria (What We Measure)

Metric	Target	How We Measure	Product Feature
Student daily login rate	>50% of enrolled students	Activity logger + admin dashboard	student_activity_log events
On-time submission rate	>70%	Submission timestamps vs due dates	Assignment submission tracking
Average streak length	>5 days	Streak system data	Streak display, gamification engine
Teacher grading turnaround	<48 hours	Grade timestamp vs submission timestamp	Grading interface analytics
Evidence coverage	100% of graded assignments	Evidence table completeness	Automatic evidence generation
CLO attainment visibility	Real-time for all stakeholders	Curriculum matrix, student dashboard	Attainment rollup, CLO progress bars

The killer metric for the decision-maker: "In 2 weeks, you have a live curriculum matrix with real attainment data — something that used to take a semester of manual data collection."

3. RETENTION — Why They Continue After Pilot

3.1 The Three Dependency Layers

Retention isn't about one feature. It's about creating three layers of dependency that make switching painful:

Layer 1: Data Gravity (Institutional)

Once an institution has a semester of evidence records, CLO-PLO-ILO mappings, and attainment data in Edeviser, migrating away means losing their accreditation evidence trail. Evidence records are immutable and append-only — they form a verifiable audit log that accreditation bodies can inspect.

Product features creating data gravity:

- Immutable evidence records (cannot be recreated elsewhere)
- Outcome attainment history (semester-over-semester trends)
- CQI action plans linked to attainment gaps
- Accreditation report templates pre-configured for their body (CNA-Q, ABET, etc.)
- Audit logs (compliance requirement)

Layer 2: Daily Habit Formation (Student)

Students who build streaks, earn badges, and track their XP don't want to lose progress. The gamification engine creates behavioral lock-in through:

Product features creating habit dependency:

- Streak system (losing a 30-day streak hurts — loss aversion)
- Badge collection (sunk cost of earned achievements)
- Level progression (Level 12 student won't start over at Level 1)
- Leaderboard position (social status within peer group)
- XP history (visible record of effort)
- Daily habit tracker (Login, Submit, Journal, Read — becomes routine)
- Team challenges (social accountability)

Layer 3: Workflow Integration (Teacher)

Teachers who adopt rubric-based grading with auto-evidence generation won't go back to manual OBE reporting. The time savings become expected, not optional.

Product features creating workflow dependency:

- Rubric-based grading → auto evidence (saves 30+ min per assignment per section)
- AI feedback drafts (saves 5–10 min per student per assignment)
- At-risk early warning (replaces manual student monitoring)
- Grading queue with real-time updates
- CLO attainment dashboard (replaces end-of-semester spreadsheet analysis)
- Adaptive quiz generation (replaces manual question creation)

3.2 Key Retention Signals to Monitor

Signal	Healthy	At Risk	Action if At Risk
Teacher weekly active rate	>80%	<50%	1:1 training session, identify friction points
Student DAU/MAU	>60%	<30%	Review gamification tuning, check if assignments are being created
Evidence generation rate	Matches grading rate 1:1	Evidence gaps	Check if teachers are using rubric grading vs manual
Admin dashboard visits	Weekly	Monthly or never	Schedule quarterly review meeting, show report value
Streak continuation (7-day)	>40% of students	<20%	Review notification settings, check if streak risk alerts are enabled
Assignment creation rate	Steady or increasing	Declining	Teacher may be reverting to old LMS — intervene

3.3 The Retention Flywheel

Teacher grades with rubric

- Evidence auto-generated
- Student sees CLO progress + earns XP
- Student engages more (submissions, journal, habits)
- More evidence generated
- Richer attainment data for coordinator/admin
- Better accreditation reports
- Institution sees ROI
- Renews contract
- More courses onboarded
- More teachers using rubric grading
- Cycle accelerates

The flywheel only works if teachers are actively grading through the platform. Teacher adoption is the single most important retention lever.

4. SCALING — How We Expand

4.1 Expansion Path: 1 Course → Department → Campus → Network

Stage 1: Course → Department (Semester 1 → Semester 2)

Trigger: Pilot results show measurable improvement in student engagement and evidence coverage.

Expansion motion:

1. Present pilot results to department head: "Here's the curriculum matrix for Dr. [teacher]'s course. Every CLO has evidence. Student engagement was [X]% daily active. Here's what this looks like for your entire department."
2. Offer department-level pilot: 5–10 courses, all teachers in the department.
3. Coordinator gets access to cross-course PLO attainment view (curriculum matrix).

Product features that drive department expansion:

- Curriculum matrix (PLO × Course grid) — only valuable with multiple courses
- Cross-course CLO coverage heatmap — shows gaps across the department
- Coordinator dashboard — aggregated view that's meaningless with 1 course
- Gap analysis view — identifies which PLOs lack sufficient course coverage
- Sankey diagram — visualizes outcome flow across the program

Key insight: The coordinator dashboard is intentionally designed to be most valuable at department scale. A coordinator with 1 course sees a boring dashboard. A coordinator with 10 courses sees actionable intelligence. This creates natural pull for expansion.

Stage 2: Department → Campus (Semester 2 → Semester 3)

Trigger: Department-level attainment data impresses the dean or QA director. Accreditation visit is approaching.

Expansion motion:

1. Admin gets access to institution-wide dashboard: "Here's your PLO attainment across all programs. Here's your accreditation report — one click."
2. Other department heads see the pilot department's results and request access.
3. Admin approves campus-wide rollout.

Product features that drive campus expansion:

- Admin dashboard with institution-wide KPIs
- Accreditation report export (PDF, configurable for CNA-Q/ABET/HEC)
- Cross-program comparison analytics
- Cohort comparison and semester trends
- Graduate attribute tracking
- Competency framework alignment
- Audit logs (institution-wide compliance)

Stage 3: Campus → Multi-Institution (Year 2+)

Trigger: Published case study, word-of-mouth in Qatar's small higher education community, accreditation body recognition.

Expansion channels:

Channel	Mechanism	Product Tie-In
Case study	Published results from pilot institution (engagement %, attainment improvement, time saved)	Admin dashboard exports, before/after metrics
Accreditation body referral	CNA-Q or ABET evaluators see Edeviser-generated reports during visits	Accreditation report templates matching body requirements
University network	Qatar's 12 universities are a tight community — QU success spreads to UDST, HBKU	Same product, new institution tenant
Conference presence	Present at regional EdTech/accreditation conferences	Live demo of curriculum matrix + student engagement
Faculty mobility	Teachers who move between institutions bring familiarity	Same UX, same workflow

4.2 The Cluster Approach

Qatar has 12 universities and 30+ technical colleges in a single city (Doha). This is a cluster market — one success story reaches every decision-maker through:

- Shared accreditation bodies (CNA-Q covers most local institutions)
- Faculty who teach at multiple institutions

- Ministry of Education mandates that apply to all institutions
- Small community where QA directors know each other

Strategy: Win 1 institution convincingly → present at the next CNA-Q workshop → 3 institutions approach us.

4.3 Pricing That Encourages Expansion

Tier	Students	Annual License	Per-Student Effective	Implementation
Starter (Pilot)	Up to 500	\$30K–50K	\$60–100	\$10K
Growth	500–2,000	\$50K–100K	\$50–100	\$20K
Enterprise	2,000+	\$100K–250K	\$50–125	\$40K

Volume incentive: Per-student cost decreases as the institution scales. A department paying \$50K for 500 students (\$100/student) sees the rate drop to \$50/student at campus scale. This makes the CFO's expansion math easy.

5. PRODUCT → GROWTH MAPPING

5.1 What Drives Adoption (First 2 Weeks)

Product Feature	Why It Drives Adoption	Time to Value
Bulk CSV import	100 students onboarded in 2 minutes, not 2 days	Minutes
Rubric builder with templates	Teacher creates first assignment in 5 minutes	Minutes
Auto evidence generation	First grade → first evidence record → "this actually works" moment	Seconds after first grade
Curriculum matrix	Coordinator sees live CLO coverage — replaces weeks of spreadsheet work	After first 2–3 assignments graded
Student onboarding wizard	7 questions, <3 min, personality + learning style profiled	Minutes
Arabic/English bilingual	No localization barrier for Qatar market	Immediate
Admin onboarding wizard	Guided setup: institution → programs → courses → users	30 minutes

5.2 What Drives Retention (Weeks 2–8)

Product Feature	Why It Drives Retention	Dependency Created
Streak system + streak freeze	Loss aversion — students protect their streaks	Behavioral habit
XP + levels + badges	Sunk cost — students won't abandon Level 12 progress	Achievement investment
Leaderboard (individual + team)	Social status — top 10% badge, league tiers	Peer competition
AI feedback drafts	Teacher saves 5–10 min per student — becomes expected	Workflow efficiency
At-risk early warning	Teacher catches struggling students 7 days earlier	Proactive intervention
Daily habit tracker	Login/Submit/Journal/Read becomes daily routine	Behavioral lock-in
Immutable evidence trail	Accreditation data accumulates — can't recreate elsewhere	Data gravity
CLO progress dashboard	Students see skill growth in real time — motivating	Self-regulated learning
Adaptive quizzes	Personalized difficulty keeps students in flow state	Engagement quality
Team challenges	Social accountability — teammates depend on each other	Social obligation

5.3 What Drives Expansion (Month 2+)

Product Feature	Why It Drives Expansion	Who It Convinces
Curriculum matrix (multi-course)	Only valuable with 5+ courses — creates pull for department adoption	Coordinator
Admin dashboard (institution KPIs)	Only valuable with multiple departments — creates pull for campus rollout	Admin / Dean
Accreditation report export	One-click PDF with evidence citations — replaces weeks of manual work	QA Director
Cross-program comparison	"Which program has the lowest PLO attainment?" — actionable at scale	Department Head / Dean
Gap analysis view	Identifies curriculum holes across the program	Coordinator
Cohort comparison + semester trends	"Are students improving semester over semester?"	Admin / Accreditation body
Graduate attribute tracking	Maps outcomes to national qualification frameworks	QA Director
CQI action plans	Closing-the-loop documentation required by accreditation bodies	Coordinator
Course file generation	Auto-generated per course per semester — massive time saver at scale	Teacher / Coordinator

6. INSTITUTIONAL JOURNEY — STEP BY STEP

Step 1: First Contact

Channel: Direct outreach to QA director or program coordinator via LinkedIn/email, or referral from accreditation body workshop.

Message framework:

"We noticed [Institution] is preparing for [CNA-Q/ABET] accreditation. We built a platform that eliminates the gap between grading and OBE reporting — teachers grade once, evidence is auto-generated, and your accreditation report is one click away. Would a 20-minute demo be useful?"

Step 2: Discovery Call (20 min)

Goal: Confirm the pain, identify the decision-maker, propose a pilot.

Questions to ask:

1. "How do your teachers currently report CLO attainment?" (Confirms manual process)
2. "How long does it take to compile an accreditation report?" (Quantifies pain)
3. "What's your next accreditation visit timeline?" (Creates urgency)
4. "Would you be open to a 2-week pilot with one course to see the difference?" (Low commitment ask)

Step 3: Demo (30 min)

Show, don't tell. Live demo flow:

1. Create a course with 3 CLOs (2 min) — show Bloom's verb guide
2. Map CLOs to PLOs (1 min) — show weight validation
3. Create an assignment with rubric (3 min) — show template reuse
4. Grade a submission using rubric (2 min) — show auto-evidence generation
5. Show curriculum matrix updating in real time (1 min) — the "aha" moment
6. Show student dashboard: XP earned, streak started, CLO progress bar (2 min)
7. Export accreditation report as PDF (1 min) — the closer
8. Show admin dashboard with institution KPIs (2 min) — paint the campus vision

Total demo time: ~15 min, leaving 15 min for questions.

Step 4: Pilot Agreement

Terms: Free pilot, 1 course, 1 teacher, 30–100 students, 2–4 weeks. We handle setup. No contract, no commitment beyond the pilot period.

What we need from them: 1 willing teacher, student list (CSV), course CLOs, and 2–3 existing assignments they want to run through the platform.

Step 5: Pilot Execution (2–4 weeks)

Our involvement:

- Day 1–3: Setup (we do it with the teacher)
- Day 7: Check-in call — review early metrics, address friction
- Day 14: Mid-pilot review — share engagement dashboard with coordinator
- Day 21–28: End-of-pilot presentation to decision-maker

Step 6: Pilot Results Presentation

Audience: Department head, QA director, or dean.

Presentation structure:

1. Before/after comparison: manual OBE reporting time vs Edeviser
2. Student engagement metrics: DAU, streak data, submission rates
3. Evidence coverage: 100% of graded assignments have evidence records
4. Live curriculum matrix: "This is what your department could look like"

- 5. Accreditation report preview: "This took 1 click, not 2 weeks"
- 6. Proposal: Department-level rollout for next semester

Step 7: Department Expansion

Trigger: Positive pilot results + upcoming accreditation visit.

Onboarding: Bulk teacher training (2-hour workshop), bulk student import, coordinator access to curriculum matrix.

Step 8: Campus Rollout

Trigger: Department success + admin seeing institution-wide value.

New capabilities unlocked: Admin dashboard, cross-program analytics, accreditation report export, audit logs, graduate attribute tracking.

Step 9: Renewal & Referral

Trigger: End of first year, accreditation visit completed successfully using Edeviser data.

Referral mechanism: Case study published, presented at CNA-Q workshop, shared with peer institutions.

7. COMPETITIVE MOAT SUMMARY

Moat Layer	What It Is	Why Competitors Can't Easily Replicate
Dual-engine fusion	Compliance + engagement in one feedback loop	Competitors are either OBE tools (boring) or gamification tools (no compliance). Fusing them requires deep domain knowledge of both.
Immutable evidence trail	Append-only, auditable evidence records	Once an institution has 2 semesters of evidence, switching means losing their audit trail.
Behavioral lock-in	Streaks, XP, badges, levels, leaderboards	Students resist losing progress. Teachers resist losing workflow efficiency.
Accreditation-body alignment	Templates for CNA-Q, ABET, HEC, AACSB	Each template requires understanding the specific body's requirements. First-mover advantage in Qatar.
Cluster market dynamics	Qatar = 12 universities in 1 city	Win 2–3 and word-of-mouth does the rest. First mover in a small, connected market.

8. RISKS & MITIGATIONS

Risk	Probability	Impact	Mitigation
University procurement cycles are slow (3–6 months)	High	High	Pilot-first approach bypasses procurement — pilot is free, no contract needed
Teachers resist new tools	High	High	Reduce friction to near-zero: grade with rubric = done. AI drafts feedback. No extra OBE form.
Students don't engage with gamification	Medium	Medium	Gamification is the bonus, not the pitch. Core value is compliance automation. If students don't engage, institution still gets OBE value.
Competitor enters Qatar market	Low (short-term)	High	Speed advantage — we're production-ready now. Competitors need 12+ months to build equivalent OBE + gamification fusion.
Accreditation body changes requirements	Medium	Medium	Configurable report templates. CQI module adapts to new standards.
Pilot institution doesn't convert to paid	Medium	High	Ensure pilot demonstrates clear ROI (time saved, evidence generated). Target institutions with imminent accreditation visits.
